DETAILED ACTION

Claim Objections

1. Objections withdrawn in light of the amendment.

Claim Rejections - 35 USC § 112

2. Rejections withdrawn in light of the amendment.

Allowable Subject Matter

3. Claims 10-12, 14-16 allowed.

The following is an examiner's statement of reasons for allowance:

Referring to claim 10, neither Watt nor the prior art of record, taken either alone or in obvious combination disclose a method of operating a harvesting machine having all the claimed features of applicant's instant invention, specifically including: the step of adjusting a performance variable of the harvesting machine occurs in dependence on the output of an inverted form of a yield loss estimation function $y'(t,g) = \exp(gu(t)) - 1$; wherein $y'(t,g)$ is the estimated yield loss, t is time, g is the stochastic parameter, $u(t)$ is the feedrate of crop, and \exp is an exponential function. It is for these reasons that applicant's invention defines over the prior art of record. Claims 11, 12, and 14 depend from claim 10 and are therefore also allowable.

Referring to claim 15, while Watt teaches a method of mapping one or more field lots for variations in a stochastic parameter that characterizes the instantaneously prevailing readiness with which crop is processed in a harvesting machine (Col. 17, line 66, - Col. 18, line 42), the method comprising the steps of: operating a harvesting machine to harvest crop in a field lot (See Fig. 4, element 160); measuring the machine effectiveness (Col. 25, lines 51-54) and determining the position of the machine in the field lot (Col. 11, lines 22-23); and mapping the optimized

parameter value g' so as to produce a parameter map of the field lot (Fig. 4; Col. 18, lines 10-15; Col. 11, lines 15-27). Neither Watt nor the prior art of record, taken either alone or in obvious combination disclose a method of mapping one or more field lots for variations in a stochastic parameter g that characterizes the instantaneously prevailing readiness with which crop is processed in a harvesting machine having all the claimed features of applicant's instant invention, specifically including: simultaneously measuring a machine load and the machine effectiveness and determining the position of the machine in the field lot; storing data indicative of the position of the harvesting machine at time t ; using the measured machine load data $u(t)$, and machine effectiveness data $y(t)$ in an optimization of said parameter; and mapping optimized parameter values obtained from the step of using the measured machine load data $u(t)$ and machine effectiveness data $y(t)$ in an optimization of said parameter; so as to produce a parameter map of the field lot. It is for these reasons that applicant's invention defines over the prior art of record. Claim 16 depends from claim 15 and is therefore also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
